PERSONALISATION

LABELS

Our offer includes a full range of haberdashery accessories that give prestige and individual character to personalized projects. These include labels. This is an important element in the production and marking of clothing. They create a brand image. We use woven labels both in newly sewn clothing, as well in clothing from the catalog by removing the original manufacturer's tag and replacing it with the customer's tag. Labels can be used both inside and outside the garment, emphasizing the brand.

JACQUARD LABELS

SCREEN PRINTED LABEL

PRINTED SATIN LABELS

CARDBOARD LABELS (HANGTAGS)

RUBBER PATCHES - ELASTOMERS

EMBROIDERED PATCHES

WOVEN RUBBER WITH DECORATION

ACCESSORIES

We also offer a wide selection of strings and lock hangers. Hangers for zippers of jackets, sweatshirts or bags, which are not only effective, but also very practical and comfortable. The pendant can be made according to an individual project with the company logo. Strings are a haberdashery element for hoods or trousers. Round or flat laces are available in many colors and patterns. Possible realization on individual order.

PRINTING TECHNIQUES

SCREEN PRINTING

Screen printing is the most popular printing technique on clothes and other textiles. Printing technique consists in pressing the paint through the mold on a special basis prepared matrix commonly known as a screens. The screen is covered with an emulsion on which it is mapped printed image. Pushed paint passes through these areas of the screen that are not covered with emulsion. That's how the graphic is created on textile.

Colors: variety of colors and shades as well as solid colors

Effects and Types:

- puff print (3D, puffy)
- photorealistic print
- gel print (3D imitation of water/glass)
- solid print (18 PANTONE colors)
- gold/silver print
- glitter print
- HD print (3D and sharp edges)
- raster print (3D effect, photorealistic)
- printing with solvent inks

Graphic files: vector graphics (ai, eps, cdr, pdf) and bitmap (jpg, png, psd, pdf, tiff) min. 300 dpi

Additional information: One of the cheapest techniques marking, especially attractive for series over 20 pieces. Very durable and resistant to washing.

RASTER PRINT

SUBLIMATION

Printing technology dedicated for polyester clothing, including sportswear. It is also popular in decorating cups. The first stage of production is digital printing on special paper using a special printer. The next step is transferring the printed graphics to the target surface polyester. This is done using heat presses which thanks to high temperature activate the dyes by permanently binding them to the material.

Colors: various colors and shadows as well as solid colors printed on white fabric only

Special effects: Ideal for photo-like patterns

Graphic files: vector graphics (ai, eps, cdr, pdf) and bitmap (jpg, png, psd, pdf, tiff) min. 300 dpi

Additional information: prints work only on fabrics with min. 70% polyester; they are indelible to the touch; it becomes an integral part of the printed surface, which it does making it virtually indestructible

EMBROIDERY

Computer embroidery is an innovative and very efficient method decorating clothing, which is characterized by a three-dimensional, raised design. The pattern is made by special threads. It is used, among others, on polo shirts, sweatshirts, fleece, jackets, vests, caps, shirts and much more.

Colors: limited number of colors

Special effects: can be combined with screen printing and DTG

Graphic files: vector graphics (ai, eps, cdr, pdf) min. 300 dpi

Additional information: Decoration on hats and textiles with a higher grammage, where printing is not possible; Resistant to high temperature washing and practically for ironing.

DTG

One of the latest printing technologies, best for printing single pieces. Inks used to print have Oeko-Tex standard Certificate. The certificate means that the device allows you to secure printing on fabrics intended even for babies.

Colors: various colors and shadows as well as solid colors

Special effects: Ideal for photo-like patterns

Graphic files: vector graphics (ai, eps, cdr, pdf) and bitmap (jpg, png, psd, pdf, tiff) min. 300 dpi

Additional information: Prints work only on cotton

DTF overprints are a new technology of high-quality overprints. It is perfect for low and medium volume productions. These prints are relatively cheap and quick to produce compared to other printing methods. Execution process DTF prints, consists in printing graphics on a special foil, and then heat presses to textile.

Colors: various colors and shadows as well as solid colors

Special effects: photo quality prints

Graphic files: vector graphics (ai, eps, cdr, pdf) and bitmap (jpg, png, psd, pdf, tiff) min. 300 dpi

Additional information: easy production and application process

FLEX

Special films are cut by a computer-controlled plotter cutting and then transferred to clothing by heat press. Underneath the actual foil there is an imperceptible layer adhesive, activated only under the influence of high temperature.

Colours: uniform solid colors without tonal transitions

Special effects: effects, e.g. holographic, metallic

Graphic files: vector graphics (ai, eps, cdr, pdf) min. 300 dpi

Additional information: resistant to washing, stretching and damage

EMBOSSING

Embossing is one of the innovative techniques that are slightly less universal, but allow you to create a logotype with an unconventional appearance and properties.

The most important assumption of the fabric pressing process is the change in the structure of the material under the influence of high temperature. Unlike thermal transfer or sublimation, however, no inks or other dyes are used here. It is based on two basic types - traditional embossing and 3D embossing. In both cases, to create a pattern, it is necessary to prepare a matrix dedicated to this function.

The traditional stamping process is sometimes called deep stamping. A specially prepared pattern matrix is heated to a high temperature, and then pressed to the selected piece of material. In this way, some of the fibers are deformed and "pressed" inside. This creates a permanent pattern.

In the case of 3D embossing, the final effect is even more spectacular. This process is therefore often called relief embossing. In addition to the matrix, a special stamp called a male must also be used to emboss the pattern.
